Business Proposal

For Ranboo

The following document includes a serious business proposal regarding the creation of a fully customized and developed Minecraft-based server for the creator and influencer who goes by the name of Ranboo.

Overview

The following document includes a serious business proposal regarding the creation of a fully customized and developed Minecraft-based server for the creator and influencer who goes by the name of Ranboo.

We are pleased to submit this proposal in creating a unique server in the game we all know and love, Minecraft! Our company aims to grow in the community of Minecraft through content creators who put forth a positive impact on the realm of Minecraft players and represent our company's image. It is evident you have improved the engagement in the sizeable body of people we find ourselves in.

The Objective

Create a Minecraft Server tailored to Ranboo with the insight from the content creator to determine the type and style of the server they wish for.

Our goal is to continue our efforts in creating the most unique content ever seen in Minecraft. In doing so we guarantee the satisfaction of our clients as we put our highest level of effort into our work! We take pride in the work we showcase amongst the company and so should you! Ranging in our creations we feature some of our professional builds, graphic designs, past server experiences, and back-end development opportunities on our website! (<https://redsmileyface.com>)

The Opportunity

The opportunity to create in the community of Minecraft has been a gift to our team. While we have featured commissioned work on our website, we would love to offer you this creation at the lowest charge possible! We ask that if this opportunity is granted that the news stays behind closed doors and away from public ears. This opportunity would allow our team to continue to learn and develop the one-of-a-kind content at a new level.

The pricing would be a volunteer for the development fees, while hardware costs and external fees will remain. Prices are never finalized until spoken in detail as they are dependent on many variables.

Our Proposal

Although the type of server varies depending on the client's ideas, branding, and intentions. We have devised a mockup plan based on your content.

The final server idea will be based on your video game preferences, favorite public Minecraft servers, and your ideas for further interaction amongst your fan-base. We like to acknowledge the numerous game-modes and server types that there are within Minecraft such as but not limited to: Minigame, Event, Factions, Sky-block, Survival, Prisons, Roleplay, Hardcore, and more...

Generalized Mockup

Please Note: This is in no way the idea being used. All final ideas must be approved and or given by Ranboo (Client). This is here to show some of the simplistic ideas and features that could be implemented.

One idea you may consider is a Survival Server built alongside the Roleplay idea. While many creators have released their survival server, we aim to make our Minecraft content unique and interesting that will entertain the players as long as they want to play for. While doing so we must allow for the circulation of new players alongside the resurgence of the regular players.

Utilizing custom textures and models we can create custom tools, weapons, and machinery to bring the modded feel of Minecraft into Vanilla! Alongside the never seen before methods of creation for the server, players will explore a fully custom terrain built using special external applications while also undergoing manual terraforming overall! The idea of class systems can be implemented at the start in which each user will select their class which brings perks to their character! Level up your player attributes, build your epic shops and homes and fight in a minigame every hour on the hour to gain (in-game) currency to be used on the (in-game) black market and at player shops. Team up with other community members by joining their clan and building team bases! Level up your Clan Level to be able to claim more land and fight as one as you strive to beat Minecraft and control the player-driven economy!

The server will feature iconic symbols from the creator's channel such as:

- The Unicorn Chair
- Black Pet Cat
- Ranboo Mask

- "DO NOT READ!" Book
- Crown

Execution Strategy

Our execution strategy incorporates utilizing a team of around 10 dedicated Minecraft players who have built, developed, tested, and or scripted in the past. Alongside our current team of ten, we would love to incorporate the help from either a selected few by the client or the moderators used by the client to maintain a fast pace. These moderators or a select few would allow for a more community-driven server while also incorporating every aspect of the client's brand to ensure all areas are covered and the server is full of exclusive content.

Upon further research, we will request server hardware with minimal size while in development, then requesting a hardware upgrade a month before the intended release to perform extreme stress tests to ensure it is ready and can handle the extensive amounts of players the server will entail upon being announced.

We will gladly work our hardest to find the best solutions for the hosting, while we also will search for partners or sponsors if the client wishes to utilize an expensive and reliable host. Although we foresee the server store paying for the hosting costs each month. We will attempt to provide the hosting needed during development so that it does not inconvenience or cost money to the client until they surely want to utilize the work we have created.

Technical Aspects

Dependent upon the finalized server type, we will utilize a Contabo hosted VPS server while in development to ensure extensive amounts of money is not castoff for unneeded or unwanted reasons.

The Development Server Specifications:

- 10 CPU Core
- 60 GB RAM
- 1.6 TB SSD
- 1Gbit/Port Internet
- 4 Snapshots
- United States (Missouri) Based Machine

Our business owns our Virtual Private Server that we will attempt to utilize during development. *(If you wish to own your hardware, it is \$45 per/m.)*

The production server will use a high-powered dedicated server paid via partnership or shop profits. (Excluding 1st month's payment.)

Satisfaction Guarantee

If Ranboo (Client) is unhappy with the results or would like to halt the use of our work and we are unable to fix and or organize a new method to solve the issues presented, our work may be terminated and RedSmileyFace and Ranboo will part ways peacefully.

We will do everything with all of our efforts and always put forth the time and work ethic to create something extravagant. If we fail in doing so, under no circumstance should there be blackmailing or false statements to negatively hurt one's business or one's career?

We take this opportunity as working for free. We will work harder and smarter than anyone you've ever met. At the end of the day, if you would like to halt our development, you may do so. If you wish to use us further to allow the release of this production, we may form a new agreement so that we can continue to release updates and manage the servers.

Official Statement:

Dear Ranboo,

I would like to thank you for your interest in our services and would love to speak further in detail if possible. Your attitude and view on the community represent what we stand for. We would love to work further with you and answer any concerns you may have. As seen on our website, we have done commissioned work in the past for a wide variety of YouTubers. As a business, we strive to grow especially leaving our footprint behind to be seen and enjoyed by all the players and onlookers. We would love to take this opportunity if given to work for free. (Excluding Software and Development Fees via External Businesses.) We are very flexible and can create unique content tailored to your brand. With my personal 4+ years of experience, I can create numerous utilities used in creating a server as one person. From creating graphics, models, textures, builds, to the plugins and scripts that pull everything together. Thank you again for your time, and we hope you consider our proposal.
